PROFESSIONAL SUMMARY

Full Stack Mobile App Developer with 5+ years of experience building high-performance mobile and web applications in Flutter, Native Android, and Laravel. Led a 6-member team delivering 12+ production projects published on Google Play and the Apple App Store. Strong in scalable architecture, REST API design, Clean Architecture, and performance optimization, with hands-on LLM API integration and automation workflows.

PROFESSIONAL EXPERIENCE

Software Engineer — Xorgeek Ltd

Oct 2021 – Present

Mobile and web solutions company

- Led a 6-member team delivering 12+ projects on schedule, cutting delivery delays by 30% and lifting client satisfaction by 15%.
- Published and maintained production apps on both **Google Play** and the **Apple App Store**, owning signing, store listings, staged rollouts, review compliance and crash monitoring.
- Architected Flutter (GetX), AWS Lambda, Firebase and Laravel applications on Clean Architecture and MVVM, serving 10K+ monthly active users across healthcare, sports, e-commerce and IoT.
- Wrote native Android (Java, Kotlin) and platform-channel code where Flutter plugins fell short, including a foreground service that keeps GPS tracking alive under Android background limits.
- Integrated Google Maps SDK, BLE, Firebase Cloud Messaging, Stripe, OCR and LLM APIs to ship AI-assisted features.
- Established code review, branching and release practice, with Sentry and Google Analytics for production monitoring.

Senior Flutter Developer (Contract, Remote) — Icon Train Smarter Ltd, London, UK

Dec 2025 – Feb 2026

AI personal-training app

- Built and refined screens for Icon Training, an AI personal-training app, remotely with a London-based team.
- Integrated Google Maps SDK for run tracking, and resolved UI and layout problems across several existing screens.
- Worked to Jira tickets on a weekly delivery cycle, with daily review with the project manager.

CORE SKILLS

Frameworks & Languages: Flutter (Dart), Native Android (Java, Kotlin), Objective-C, Python, PHP, MVVM, MVC, Clean Architecture, State Management (GetX, Provider)

Mobile Integrations: Google Maps SDK, BLE (Bluetooth Low Energy), Firebase (Firestore, Realtime Database, Cloud Messaging), Google ML Kit, Google Sheets API, Retrofit, REST API integration

Backend Development: Laravel (PHP), Python, AWS Lambda, Firebase Functions, REST APIs, WebSockets, Cron Jobs, API testing (Postman)

AI & Image Processing: LLM API integration (OpenAI, Gemini, Claude), prompt engineering, OCR and image processing, Google Cloud Vision API, AI summarization

Cloud & DevOps: AWS (Lambda, DynamoDB, Cognito, SNS, SES), Google Cloud / Firebase, Firebase App Distribution

Databases: DynamoDB, Firebase Realtime Database, Firestore, SQLite, MySQL

Testing & Quality: Unit testing, Sentry error monitoring, Google Analytics, Stripe payment integration

Tools: Git, GitHub, Bitbucket, JIRA, Wrike, Android Studio, Xcode, Visual Studio Code

Soft Skills: Team leadership, collaboration, problem solving, Agile methodology

SELECTED PROJECTS

RunMate Club — Marathon Tracker (Flutter)

Jan 2026 – Present

Lead Flutter Developer | Android and iOS | 1K+ users | runmate.club

Tech: Flutter, GetX, Google Maps SDK, Firebase, Google Analytics, Firebase App Distribution

- Lead Flutter Developer for a marathon platform, launched with PANTONIX TIGER RUN DHAKA 2026 for the Prokriti O Jibon Foundation and Channel i — the first app-based live marathon tracking in Bangladesh.
- Built real-time GPS tracking on Google Maps with distance and pace, plus Free Run, Group Run, leaderboards and performance history.
- Background tracking and offline storage keep sessions recording with the screen off or without network, syncing to Firebase on reconnect.
- Delivered the organizer admin panel used to create and manage marathon events.

Digimed Protect99 (Flutter) Android Google Play Tech: Flutter, GetX, AWS DynamoDB, AWS Cognito, AWS SNS, AWS SES, Firebase Cloud Messaging • Online identity verification and secure portal for the healthcare and digital medical sector. • Authentication and user management on AWS Cognito, with DynamoDB storage and SNS/SES notifications.	Aug 2024 – Mar 2025
Medishop — Online Pharmacy (Laravel + Flutter) Web and mobile medi-shop.xorgeek.com Tech: Laravel (backend and admin panel), Flutter, GetX, Provider, FCM, Google Cloud Vision API, Cron Jobs • Built a prescription-upload ordering platform with pharmacist verification and push notifications for approval, payment and pickup. • Automated refill reminders with scheduled cron jobs to drive repeat orders, and used Google Cloud Vision API to read uploaded prescription images. • Delivered the Laravel admin panel for order, inventory and verification management.	Aug 2024 – Nov 2024
Gram Stain Atlas (Flutter) Android 1K+ users Google Play Tech: Flutter, GetX, WebView, OCR, offline medical database • Medical reference app for Japanese clinical users with a searchable offline gram-stain database. • Integrated OCR to read text from medical commentaries and reference documents.	Jun 2023 – Dec 2023
Karuta Sound Player Android 1K+ users Google Play Tech: Low-latency audio playback, performance optimization • Low-latency audio playback app for Japanese karuta practice, tuned for precise timing.	Nov 2021 – Oct 2022
Classic Golf App (Native Android) Android 5K+ users Google Play Tech: Native Android, Java, location-based services, performance optimization • Production-grade golf course app with smooth navigation and location-based features. • Optimized rendering and location updates to reduce battery drain over long sessions.	Feb 2022 – Aug 2022
BLE Mesh Messaging App (Native Android) Demo video Tech: Native Android, Java, Kotlin, Bluetooth Low Energy Mesh • BLE Mesh communication system letting nurses exchange messages without internet, with one-to-one and multi-node chat.	Nov 2021 – Feb 2022

OPEN SOURCE

reliable_background_location (Flutter plugin) pub.dev GitHub Tech: Dart, Kotlin, Android foreground services, Play Services Location, unit testing • Flutter plugin for Android background location that keeps recording through Doze, screen-off, battery saver and process death. • Buffers fixes natively while no Dart isolate is alive, and restores session state after an OS-initiated service restart. • Returns typed failures for the reasons Android refuses a foreground service start, instead of reporting success while nothing records.	Sep 2026
---	-----------------

EDUCATION

M.Sc. in Applied Statistics & Data Science <i>Jahangirnagar University</i>	Aug 2022 – Oct 2023
B.Sc. in Software Engineering <i>Daffodil International University</i>	May 2014 – May 2019

ADDITIONAL INFORMATION

- **Certifications:** SEIP — Android App Development, 2020
- **Languages:** English (professional), Bangla (native)
